SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Blood Donation Website

---

1. Introduction

1.1 Purpose

The purpose of the Blood Donation Website is to provide a user-friendly website that helps connect potential blood donors with people who need blood. It displays information about blood donation and provides interfaces for donor registration and blood requests.

1.2 Scope

The website is designed using HTML and CSS. It provides a simple interface for users to explore blood donation information, view donor-related sections, and access registration and request forms.

Since this is a frontend-only project, form submissions and data storage will not work without additional backend technology.

1.3 Objectives

- To create an attractive and responsive blood donation website.
- To provide information about blood donation.
- To display donor and blood request forms.
- To encourage awareness and participation in blood donation.

2. Overall Description

2.1 Existing System

People often rely on phone calls, personal contacts, and social media to locate potential blood donors. Information may be scattered across different sources.

2.2 Proposed System

The proposed website provides a centralized and user-friendly interface for blood donation information, donor registration forms, and blood request forms.

2.3 Modules

1. Home Module - Displays the website introduction, donation awareness information, and navigation links.

2. About Module - Explains the importance of blood donation and provides general donation information.

3. Donor Registration Module - Provides a form for entering donor details such as name, blood group, location, and contact information. In the initial version, the form is for demonstration only.

4. Blood Request Module - Provides a form for entering the required blood group, location, and request details. Actual request processing will be implemented in a future version.

5. Contact Module - Displays contact information and a contact form.

6. Future Admin Module - Will allow authorized administrators to manage donor records, review requests, and handle reported information.

3. Software and Hardware Requirements

3.1 Software Requirements

- Frontend: HTML5
- Styling: CSS3
- Code Editor: Visual Studio Code
- Browser: Google Chrome or Microsoft Edge
- Operating System: Windows or Linux

3.2 Hardware Requirements

- Processor: Dual-core processor or better.
- RAM: 4 GB or above.
- Storage: At least 500 MB of free space.

- Display: Standard desktop or laptop display.

4. Functional Requirements

- FR-01: The website shall display information about blood donation.
- FR-02: The website shall provide navigation between different pages.
- FR-03: The website shall display a donor registration form.
- FR-04: The website shall display a blood request form.
- FR-05: The website shall display contact information.
- FR-06: The website shall provide basic form-field validation using HTML attributes where applicable.
- FR-07: The website shall provide a responsive layout for different screen sizes.

Limitation: Without JavaScript or a backend, forms cannot perform dynamic processing, save submissions, or retrieve actual donor information.

5. Non-Functional Requirements

- **Usability:** The website should be simple and easy to navigate.
- **Performance:** Pages should load quickly.
- **Compatibility:** The website should work in modern web browsers.
- **Maintainability:** HTML and CSS should be organized into separate files.
- **Responsiveness:** The layout should adapt to mobile, tablet, and desktop screens.
- **Accessibility:** Forms should have labels, readable text, and sufficient color contrast.

6. System Design

The website will contain the following pages:

- index.html — Home page
- about.html — About blood donation

- donor.html — Donor registration form
- request.html — Blood request form
- contact.html — Contact page
- style.css — Common website styling

7. Testing

The following tests will be performed:

- Verify that all navigation links work.
- Check that forms display correctly.
- Verify required-field validation.
- Test the website on desktop and mobile screen sizes.
- Check page layout, colors, fonts, and image display.
- Verify compatibility with modern browsers.

8. Conclusion

The Blood Donation Website mini project demonstrates the design of a blood donation platform using HTML and CSS. It provides a user-friendly interface, information about blood donation, and forms for donor registration and blood requests. Backend functionality can be added in the future to store information and process submissions.
